CHAPTER 10		
STUDY GUIDE FOR CONTENT MASTERY		

Section 10.3 Reactions in Aqueous Solutions

In your textbook, read about aqueous solutions, reactions that form precipitates, reactions that form water, and reactions that form gases.

Circle the letter of the choice that best completes the statement or answers the question.

- A spoonful of sodium chloride is dissolved in a liter of water. What is sodium chloride in this solution?
 - molecule
 - precipitate
 - solute
 - solvent
- In an aqueous solution, water is the
 - homogeneous part.
 - precipitate.
 - solute.
 - solvent.
- Compounds that produce hydrogen ions in aqueous solutions are
 - acids.
 - aqueous.
 - bases.
 - ionic compounds.
- What type of reaction occurs between ions present in aqueous solution?
 - decomposition
 - double-replacement
 - single-replacement
 - synthesis
- What type of ions are present in solution but are not actually involved in a chemical reaction?
 - complete
 - net
 - precipitate
 - spectator
- If hydrochloric acid and potassium hydroxide react, what is the product of the net ionic equation for the reaction?
 - hydrochloric acid
 - hydrogen ions
 - potassium chloride
 - water
- Which of the following gases is not commonly produced in a double-replacement reaction?
 - carbon dioxide
 - hydrogen cyanide
 - hydrogen sulfide
 - sulfur dioxide
- $H^+(aq) + Br^-(aq) + K^+(aq) + OH^-(aq) \rightarrow H_2O(l) + Br^-$ (aq) + K^+ (aq) + Br^- (aq) is an example of what type of chemical equation?
 - complete ionic
 - net ionic
 - precipitation
 - spectator
